Application/Control Number: 10/671,480

Art Unit: 3683

1. Receipt is acknowledged of the amendment filed on 7/1/2004.

- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yagi et al. in view of Griffin.

Yagi et al. show a braking system having brake pedal 1, master cylinder 2, pressure sensor 16, accumulator 7c, propodional controller 51, auxiliary controller (at 50) and wheel brake 3. The claimed invention differs from Yagi et al. only in the inclusion of two check valves. Griffin show check valves 10, 11 in line between the master cylinder and the brakes. It would have been obvious to one of ordinary skill in the ad to have included a check valve circuit, such as shown by Griffin, in line with the

Application/Control Number: 10/671,480

**Art Unit: 3683** 

master cylinder so as to raise the brake pressure above the boiling point for high-

temperature brakes as taught by Griffin, see column 2, lines 25-35.

Re-claim 2, note spring 57 in Yagi et al.

5. Applicant's arguments filed 7/1/2004 have been fully considered but they

are not persuasive. Contrary to Applicants' contention, the second liquid in Yagi et al. is

supplied to the wheel to the broad degree claimed in that the wheel is pressurized via

slave cylinder 12.

6. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of

time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the mailing date of this final action.

7. Any inquiry concerning this communication should be directed to Matthew

C Graham at telephone number 703-308-2570.
